Suddenly...

Every other qualitative serum hCG assay is obsolete

TANDEM ICON™
ImmunoConcentrator™
hCG Assay for Serum

Fastest, Most Sensitive hCG Results Ever
Now you can have fast, qualitative hCG results without sacrificing sensitivity. Negatives are confirmed in under 5 minutes, positives even faster—with only 30 seconds hands-on time. This innovative test needs no special training. It's as simple as any slide test and a snap to read. A distinctive blue dot indicates positive results.

Matches the most sensitive RIA procedures
TANDEM ICON provides sensitivity as low as 5mIU/ml with a recommended cutoff of 25mIU/ml...so positive results can be identified as early as one week post-implantation. The two-site monoclonal antibody assay detects hCG only and eliminates cross-reactivity with LH, TSH and FSH.

Accurate hCG results when and where you need them
Now the E.R., outpatient clinic, satellite lab and other sites can do a sensitive hCG assay. And any lab can report stat hCG results without interrupting instrument schedules or sacrificing sensitivity.

FOR MORE INFORMATION just write or call toll-free. You'll receive additional literature including current studies and monographs by laboratory professionals who have evaluated the TANDEM ICON ImmunoConcentrator hCG Assay.

CALL TOLL-FREE 1-800-854-1957 (except in California).

If an Eppendorf Pipette could pipette a sample up to 48 times without refilling, it would look like this.

Imagine an Eppendorf Pipette that dispenses up to 48 times without refilling.

Imagine a pipette that makes serial pipetting at 1-second intervals as easy as pressing a small lever.

Imagine a pipette that eliminates cleaning, contamination, and carryover error problems with interchangeable Combitips, disposable plastic sample reservoirs available in 6 sizes (0.5, 1.25, 2.5, 5.0, 12.5, and 50 mL capacity).

Imagine a pipette with foolproof 'click-set' volume adjustment dial to select among 5 volume increments for each size Combitip, giving you a choice of 22 different volumes from 10 µL to 5 mL.

Only one pipette can do all this with traditional Eppendorf accuracy, precision and operating ease. Only Eppendorf makes it... the Repeater™*, the new repetitive pipette with disposable Combitips.

For literature, write: Brinkmann Instruments Co., Division of Sybron Corporation, Cantague Road, Westbury, NY 11590, or call 516-334-7500.
In Canada: 50 Galaxy Blvd., Rexdale, Ont. M9W 4Y5, or call 416-675-7911.

SYBIRON|Brinkmann
THE NEW BLOOD GAS ANALYZER WITH A MIND OF ITS OWN.

IL INTRODUCES THE BGM™ BLOOD GAS MANAGER

No other blood gas instrument provides its extensive, built-in data management.

The BGM (Model 1312) brings you the superior automation, easy operation, flexibility and dependable accuracy you expect from IL.

In addition, it has an integral, long-term Data Management System, to store and retrieve patient and quality control data on all samples analyzed. See the benefits the BGM provides:

- Saves time and labor, maintaining patient/QC data base.
- Ends manual transcription/calculations/errors.
- Shows patient trending at a glance, to enhance treatment.
- Facilitates evaluation of instrument performance, for timely maintenance.
- Stores up to 2,950 patient reports/450 tri-level QC analysis results per disk.
- Costs less than you'd expect to pay for a comparable analyzer with no data management capabilities.

See the benefits the BGM provides:

Data is easily retrieved, by patient, sample, date, control, etc. for video display, printout, or transmission to a mainframe computer.

Let the analyzer that can keep its own records take a load off your mind. Ask your IL Representative about the BGM Blood Gas Manager; call, 800-225-4040 (800-342-8856, in MA); or send for literature. Instrumentation Laboratory Inc., Lexington, MA 02173. Supplies distributed in the U.S. by Fisher Scientific.

“I’ve got 127 Urines to run.

Now, go ahead, make my day.”

Introducing FISHERbrand® UriSystem™!
The New Standard in Microscopic Urinalysis

Pour more. UriSystem eliminates the unpleasant task of decanting one tube at a time. Just load the acrylic rack and with one smooth tilting motion decant 10 at a time. Our unique tube design consistently retains a concentrated 0.4mL sample in the sediment-trap tip, compared to a more dilute 1.0mL volume of competitive tubes.

See more. This more concentrated sediment (0.4/12mL) actually increases your chances of finding significant constituents as much as 60%. Our optically clear cover glasses eliminate interference from warping or striations of plastic cover slips. And they fit together with our four-test multi-well acrylic slides to yield a monolayer of sediment. There’s no “stacking” of components to interfere with the image.

Save more. For the DRG conscious lab, UriSystem provides a streamlined, standardized urinalysis procedure that results in fewer repeats and saves valuable tech time. And, UriSystem components are sold individually, at an affordable price per component.

To learn more, circle the reply card number below. Or call us at (412) 562-8543.

U.S. Patent No. 4,335,730 and others pending.
"PARALLEL® IS EXCEPTIONALLY ADAPTABLE TO LABORATORY NEEDS"

N.L. Alpert, Clinical Instrument Systems, Vol. 4, No. 6, June 1983

"Our commitment to excellence in quality and service compels us to utilize only state-of-the-art instrumentation that is accompanied by dependable service. The Parallel® provides us with the throughput we need and the reliability we expect. Discrete analysis gives us the flexibility to offer over 60 chemical profiles.

"The Parallel® uses the most advanced computer technology and chemistry methods available. By keeping pace with state of the art technology, Sierra Nevada Laboratories is striving to provide our clients with the highest quality laboratory medicine at the most competitive prices.

The addition of the Parallel® to our laboratory has allowed us to offer an additional two test determinations to our basic Chemistry Panel, while still maintaining last year's prices to our clients. Serum Iron and Gamma Glutamyl Transpeptidase (GGT) will now be included with the 23 other determinations that make up the panel."

Dr. John Diamond
Sierra Nevada Laboratories, Inc.
Reno, Nevada

"We were looking for a Chemistry System which would provide Multi-Test-Profiles with Stat capability, single test selectivity, comprehensive test menu, and cost effectiveness. We chose the Parallel® R2D2 System of American Monitor. Our system has been in daily operation for 8 months from 7:00 a.m. to 9:30 p.m. Our Parallel® handles all Chemistry Stats, Profiles and Routine tests during this time."

Gary Guthrie, Assistant Director Laboratory Services
Richard Farrar, Section Head, Chief Operator
 Muskogee Regional Med. Center
 Muskogee, Oklahoma

Circle No. 148 on Reader Service Card

"We have bought the Parallel® as it is cheaper to run than our previous analyzer because of selectivity. Monitor Parallel® has changed our labor organization drastically. We did know that and we achieved a better organization now."

Dr. R. J. H. Scholitis
Stichting Medische Laboratorium Breda, Holland

"A large test menu was necessary to allow rationalisation of workflow within the laboratory, which previously had required several workstations. In addition we required a result editing facility and an interface to our laboratory computer.

We were pleased to establish that Parallel® fulfilled these criteria in routine use"

Dr. John McVitie
John Radcliffe Hospital
Oxford, England

"We are rapidly approaching the one year Anniversary with our Parallel®. Since our original installation the unit has been upgraded with R2D2 and ET Functions. We feel these functions greatly increase this systems utility and ease of operation."

We feel the Parallel® has totally met our expectations. Its major advantages include: consistently reliable chemistries, high volume capability, low rate of repeats and ease of data handling."

Michael Brancacolo, M.D.
Associate Pathologist
Providence Hospital
Washington, D.C.

"I must say that I am quite pleased with the performance of the 30 channel selective analyser—Parallel®. Currently it is serving as our workhorse of the biochemistry laboratories—treating as much as 70 per cent of the total workload. Average 600 patient samples are processed on the Parallel® daily — Monday through Saturday — and 29 channels are working in full swing. (One channel reserved for a future application)."

Satio Ikawa, MD, Professor, Laboratory Medicine
The JIKEI UNIVERSITY
TOKYO, Japan

PROTEIN ANALYSIS: Is a protein abnormality suspected? Screen first. Use a Beckman SPE agarose gel kit and a PARAGON electrophoresis system to get the quality of separation you need to confirm your suspicion.

The next step: identify. Get sharp, stained, final answers in 24 hours with the PARAGON agarose gel immunoelectrophoresis kit. (IgG, IgA, IgM, kappa and lambda light chains, free and bound).

Easy to handle: no cutting of troughs, no tedious removal of gels. Easy to interpret: you see distinct complete precipitation arcs and no artifacts. The new Immunofixation kit further reduces the time of analysis. You get immunoglobulin typing in two hours.

Easy to order. PARAGON IEP and IFE kits - for 10 profiles - include gels, blotters, buffers, templates, antisera, control serum and stain.

Then quantify. Get full final answers on specific proteins with a Beckman ICS'TM System. There are fourteen test kits available: IgG, IgA, IgM, C3, C4, Properdin Factor B, Albumin, Haptoglobin, Transferrin, Cerulosplasin, C-reactive protein, Alpha1-Acid Glycoprotein, Alpha1-Antitrypsin, Alpha2-Macroglobulin. Plus Rheumatoid Factor. And more to come.

For full literature on PARAGON qualitative and ICS quantitative protein analysis systems and kits, please write to: Beckman Instruments International S.A., 17, rue des Pierres-du-Niton, 1211 Geneva 6, Switzerland. Tel.: (022) 362070, \# ECKMAN Circle No. 142 on Readers' Servk* Card.
ON THE MOVE

We are a private French company. We have been involved for many years in the Research-Manufacture - and Marketing of clinical diagnostic products.

We have an extensive range of products, specially developed in the following categories: Clinical Chemistry - Quality Control - Enzymology - Immunology and Serology.

We are now a leader in our domestic market. For several years, we have been extending our export activities throughout Europe, Africa, Middle East, South and North America...

Bottom Line Performance.
No other system gives you the cost-savings per test of the Boehringer Mannheim Diagnostics Adam.

No other new automated system offers the rapid turnaround of 1200 tests per hour, 24 hours a day, with both STAT and routine testing anytime.

No other system can so efficiently cut labor, paperwork, and reagent costs, replacing several existing instruments and providing the additional savings of work station consolidation.

Nothing else can match that impact on your laboratory’s bottom line. Nothing.

For full details on the Boehringer Mannheim Diagnostics Adam, contact your BMD representative or call Boehringer Mannheim Diagnostics.

The best technology doesn’t have to be complicated...just accurate.

The Isomune System — Isomune-CK® and Isomune-LD® — for the quantitation of cardiac specific CK-MB and LD-1 — is as uncomplicated as any routine chemistry you are now doing. Unlike other methods available, the Isomune System can provide all of the following benefits to the laboratory, the physician, and the patient:

- Definitive diagnosis of MI as much as 24 hours earlier than any other method.
- Easy to perform/no special training required.
- Rapid results/faster turnaround time to the physician.
- Substantial cost savings.
- Uncompromised MB and LD-1 specificity.
- Elimination of less efficient testing methods.

THE ISOMUNE SYSTEM
for cardiac isoenzyme profiling.
So advanced it’s simple!

Free Fatty Acids—
The First Commercially Available
Enzymatic Assay Kit

The clinical significance of free fatty acids (FFA) has gained increasing recognition in recent years, but conventional methods for the quantification of FFA are time-consuming and utilize hazardous reagents. Extensive research at Wako has resulted in the development of NEFA C, the first commercially available fully enzymatic colorimetric method for the determination of FFA. This ACS-ACOD-method ensures flawless high performance and is precise, accurate and specific. It can be used quite easily with most automated or manual analyzers. NEFA C offers unrivaled procedural simplicity by eliminating extraction, and requires only small sample volumes.

*NEFA: Non-Esterified Fatty Acids

Close your eyes.
Now have someone read this to you.

You are blind. A student. Facing four years of college. With about thirty-two textbooks to read. Plus fifty supplemental texts. How are you going to manage?

With Recording for the Blind. Since 1951, we’ve helped over 60,000 blind, perceptually and physically handicapped students get through school. By sending them recordings of the books they need to read. Free.

Recording for the Blind is non-profit, and supported by volunteers and contributions from people like you who can imagine what it’s like to be blind.

Your tax-deductible donation will help our students meet their educational goals. We’d all be grateful.

If you want to know more about us, write:
Station F
Recording for the Blind, Inc.

For drug screens ordered by the Substance Abuse Center
"I wouldn't give up my TOXI-LAB for all the peaches in Georgia!"

94% of all users of TOXI-LAB Drug Detection System who responded to a recent survey would recommend TOXI-LAB to their colleagues.*

TOXI-LAB lets you deliver what the Substance Abuse Center really needs: specific identification of a wide range of specific drugs of abuse at a cost per patient that's geared to today's more cost-conscious customer. The ability of TOXI-LAB to unravel or rule out many substances in one test procedure is the key to cost control—and it applies whether you batch or run individual specimens. Cost per complete screen can be as low as $3.51.

Most important to the one who does the work, TOXI-LAB gives you a broad-spectrum drug screen without aggravation. It's an easy-to-use, manageable system backed by a 24-hour help-and-information hot line AND comprehensive training, continuing reference updates, and proficiency programs.

*Satisfaction Guaranteed or Your Money Back
We're so sure that you'll love TOXI-LAB, we make this offer: Order it. Attend the training workshop. Use TOXI-LAB for 90 days. If you're not 100% sold, you'll get a 100% refund of the purchase price. For more information, see your Marion Area Manager or phone toll free: 800-821-7772; ext. 4455 in Missouri, call collect: 815-886-5000; ext. 4455.

WHEN IS METHOTREXATE SAFE?
UNTIL THE ANSWER IS KNOWN,
THE MOST SENSITIVE ASSAY
MAKES THE MOST SENSE.

Assay of serum methotrexate is an
important safety precaution in
antineoplastic therapy, espe-
cially with children. However
there still remain some un-
answered questions.

How sensitive, for example,
should the assay be in order
to make truly accurate clinical
decisions? And what assurances of
specificity does the assay method
have? The answers vary, depending on the method you use.

That’s why it makes sense to use the test that has unsurpassed
sensitivity and specificity.

Our MTX150 Assay Kit is a radioassay\textsuperscript{125}I test for determining
MTX levels in blood serum, urine, and cerebrospinal fluid. It
is based on the competitive binding of labeled and
unlabeled methotrexate to dihydrofolate reductase.
The MTX150 Test’s primary features are twofold. Its
sensitivity, in detecting levels as low as 5 ng/ml or
1.1x10\textsuperscript{-8} moles/liter, is unequalled. And its specificity
surpasses those of other test methods by a factor of
five, better assuring indication of actual MTX levels
and not those of major metabolites like DAMPA.
The test is fast and easy, requiring only five minutes for
incubation. Priced at $145, it contains reagents
sufficient for 150 tests. Call us toll-free and order one.
With the concerns that still exist in methotrexate
therapy, what could make better sense?
