

**"We needed timely,
quality results,
at the lowest
possible cost, and
with the least
possible hassle.
That's why we chose
the new TECHNICON
SMAC[™] 3 system."**

Series Editor's note: More information on quality and accuracy of laboratory testing for drugs of abuse was presented in an Editorial and a Special Report in the September issue of *Clinical Chemistry* (1987;33:1682, 1683-6). Besides the National Institute on Drug Abuse publication (Res Monogr Ser 73: Urine testing for drugs of abuse, Rockville, MD: NIDA, 1986) distributed to those attending this Conference, another useful periodical should be brought to your attention: collected abstracts (most in English) on alcohol and drug studies: Gefährdung durch Alkohol, Rauchen, Drogen, Arzneimittel, compiled by der Bundesminister für Jugend, Familie und Gesundheit (published by the Institut für Dokumentation und Information über Sozialmedizin und öffentliches Gesundheitswesen, Westerfeldstrasse 35-37, Postfach 20 10 12, 4800 Bielefeld 1, F.R.G.).

Proceedings of previous A. O. Beckman Conferences in Clinical Chemistry can be ordered from the AACC National Office, 1725 K St., N.W., Suite 1010, Washington, DC 20006:

1. Clinician and Chemist: The Relation of the Laboratory to the Physician
2. The Clinical Biochemistry of Cancer
3. Aging—Its Chemistry
4. Human Nutrition: Clinical and Biochemical Aspects
5. Genetic Disease: Diagnosis and Treatment
6. The Brain, Biochemistry, and Behavior
7. The Biochemistry of the Reproductive Years
8. The Clinical Laboratory in the New Era: Quality, Cost, and Diagnostic Demands
9. Diabetes Mellitus . . . from Theory to Therapy (*Clinical Chemistry* Special Issue)

Special thanks go to Dr. Robert L. Habig for his determined efforts to make this Proceedings issue complete.

—V.S.M.
