ADAPT TO THE WINDS OF CHANGE.

Experience the next level of flexibility with the new AIA-600™ automated Immunoassay Analyzer. Run any combination of analytes in any patient sample at any time—at the uniform rate of 60 results per hour. No setup is required. Keyboard entries are not necessary. Choose the AIA-600 for thyroids, tumor markers or other hormones and proteins. Or dedicate it to specific profiles. The AIA-600 will grow and adapt to your laboratory for years to come. Contact Tosoh Medics today.
EPO-Trac™ detects erythropoietin (EPO) where other assays show 'none'...

In a recent study, one hundred and sixty-six (166) patient and normal samples were compared using a leading EIA kit and EPO-Trac RIA to quantify serum EPO. EIA test results from twenty study samples fell below the sensitivity of the EIA kit indicating a possible diagnosis of PVera. Fifteen of these samples came from normal volunteers. EPO-Trac test results on the same samples gave values within the 2 S.D. normal range. The very low EIA test results could lead to misdiagnosis.

The EPO-Trac radioimmunoassay (RIA) kit is the most sensitive diagnostic tool available to quantitate serum or plasma EPO, to aid in the diagnosis of anemia and polycythemia.

EPO-Trac utilizes recombinant human EPO for tracer, controls and standards. Our newly expanded, user friendly protocol delivers concise, in-depth information. Including data on Quality Control and Expected Values. EPO-Trac is the new standard for EPO assessment.

At INCSTAR, we have made a long term commitment to providing you the finest diagnostic tools available, responsive customer service and experienced technical help.

For more information call 1-800-328-1482 or 1-612-435-9710 today, or write INCSTAR Corporation, 1990 Industrial Boulevard, Stillwater, MN 55082, FAX 1-612-779-7847.

Setting New Standards

EPO-Trac™ is a trademark of INCSTAR Corporation.

The definition for complete satisfaction in protein analysis is Behring

"I like it for its speed and accuracy, plus I think Behring has the best antisera on the market. I couldn't be happier with the instrument."
Sharon Shore, Supervisor — Special Chemistries
LSU Medical Center

"The main advantage is its walkaway capability. We have cut our protein analysis time by 50-75%.
"Ellen McDowell, Medical Technologist
Columbia Hospital, Milwaukee

"The big thing for us is flexibility. The user programmability allows our laboratory to modify or develop protocols, which really broadens the scope of what we can do."
Joe McNamara, Sup. of Clinical Immunology Lab
Children's Hospital, Philadelphia

"When I evaluated it with other available systems, I chose the Behring Nephelometer for many reasons, such as software that is easy to understand and use, minimal maintenance requirements, speed, and daily QC."
Barbara Davis, Manager of Immunology Lab
Hermann Hospital

"It's alot faster than competitive instruments and requires less hands on time to start the day. We also save on reagents because we find that we have a longer period of time between calibrations."
Epple R. Bolmer
Pathology Department
Mercy Hospital & Medical Center,
Chicago, Illinois

Behring Nephelometer
225 assays per hour

Behring Nephelometer 100
100 assays per hour

AFP/SMS

A Sample Management Software System for Pre-natal AFP

- You control all of the system parameters and normative data including the text of the reports;
- Calculates amniotic fluid and maternal serum MoM: serum MoM is corrected for maternal weight, race, and insulin-dependent diabetes;
- Optional calculation of fetal Down’s Syndrome risk using AFP alone or AFP, hCG and/or unconjugated estriol (uE3);
- Direct links to most common data management systems (e.g. Photon ERA, IMx, Amerlite, RIA AID);
- Optional bidirectional link to a lab mainframe computer.
