Broad Spectrum Range—Shattering Effectiveness

Some antibiotics may look inexpensive at first, but costs per unit quickly escalate when greater concentrations or combinations of antibiotics are required. Even if you can find the right combination, some antibiotics can adversely affect the designed function of your system.

Choose the one antibiotic that alone kills a broad spectrum of Mycoplasma, as well as gram-negative and gram-positive bacteria at one low dose.

Ciprofloxacin, a new fluoroquinolone, has been demonstrated to be safe, stable and effective as an antimicrobial in diverse diagnostic systems. Stop wasting time and money—Start using Ciprofloxacin.

Call 800/227-9412 for a technical brochure on Ciprofloxacin.
The Truth About

Truthfully, most labs are still calculating LDL cholesterol because they haven't heard about LDL DIRECT™. Is your lab still coming up with an estimate instead of a real answer for LDL cholesterol? Is your lab still calculating LDL from three other tests? Think of the variation involved.

Measuring

Measuring an analyte is always better than calculating it. Especially when the calculation misclassifies one-in-four patients, seriously underestimating their LDL levels. Physicians often never realize this.

LDL

LDL cholesterol can now be measured by almost any lab. The definitive test, LDL DIRECT™ (CPT Code 83721), uses an immunoseparation. It is not affected by triglycerides and patients no longer need to fast. And it's truly accurate.

Cholesterol

Cholesterol methods used by most labs are suitable for LDL measurement. And the LDL DIRECT™ test is economically responsible. It costs healthcare much less than the three assays needed for calculation. If your lab runs cholesterol, you can be running LDL DIRECT™. It's a simple serum separation step followed by your cholesterol technique.

Get the whole truth about LDL DIRECT™. Please call 1-800-325-0250.

SIGMA DIAGNOSTICS®

© 1994, Sigma Chemical Co.  *Distributed by Sigma Diagnostics
RIA AID

RIA AID for data from both isotopic and non-isotopic assays.

ELISA AID

ELISA AID tailored to give great flexibility of sample placement on the plate.

SOFTWARE SYSTEMS

- Direct connection to your beta or gamma counter or plate reader
- Handles data from all assay types: RIA, IRMA, EIA, FIA, ELISA
- Can be configured to service up to 15 counters running simultaneously
- Built-in worklist system
- Results can be offloaded to other software systems (spreadsheet, database)
- Thorough user documentation in plain English
- OEM versions available
