- NCEP Recommendations on Measuring HDL Cholesterol
- LDL Cholesterol
- Triglycerides
- Direct DNA Sequencing in the Clinical Laboratory
- Molecular Markers for Early Detection of Malignancy
- Serum Bilirubin and Risk of Ischemic Heart Disease
- Detection of Premature Rupture of Membranes
Bad Antibody?

StatLIA® immunoassay software immediately tells you if your antibody is bad. Really. Along with your tracer, buffer, incubation conditions ... or any of the 9 components.

StatLIA’s unique standard curve lets you review an assay’s reliability quickly, by graphing confidence limits, a reference curve, and the assay’s replicate data points.

Plus, with StatLIA you can:
- Immediately pinpoint the cause of a flagged assay without repeating it
- Detect fluctuations in standard curves and their causes
- Measure the effect of reagent variations on your results
- Determine if an assay is bad, even though the controls are in
- Connect all your immunoassay instruments on-line
- Analyze each tech’s performance for each test method

Find out why StatLIA is now used by major clinical, pharmaceutical, research and government laboratories throughout North America.

Introducing the most specific marker available to measure bone loss.

No other marker is more specific for the collagen lost from bone.
Only Osteomark® quantifies cross-linked N-telopeptides (NTx), a unique biochemical marker specific to the type I collagen found in bone. As such, it provides valuable information about the rate of bone resorption—simply and efficiently. So you can identify patients who are experiencing excessive bone loss. And at the same time help physicians monitor the effectiveness of therapies aimed at preventing or treating osteoporosis—a growing concern for an aging population.

NTx is a direct degradation product of the bone resorption process. Diet and other connective tissues do not contribute to the urinary pool of NTx. What's more, NTx is excreted in urine in a form that cannot be broken down further—so that urinary NTx levels directly reflect the amount of bone collagen resorbed. No other bone marker offers this degree of specificity and sensitivity.

The speed and simplicity of ELISA technology.
And specificity is only part of the story. Osteomark is also easy and convenient to run—in your laboratory—with your personnel and equipment. The test is formatted as a microwell ELISA and utilizes an enzyme-labeled monoclonal antibody to quantify NTx in urine. No specimen pretreatment is necessary. Nor is there the need for time-consuming acid hydrolysis, extraction, or high-performance liquid chromatography. Reliable results are obtainable in as little as 2 hours—start to finish.

For more information, call 1-800-99 OSTEX.

NEW OSTEOMARK®
The NTx Assay Simply specific.

Information for Contributors

Clinical Chemistry welcomes manuscripts containing original information, experimental or theoretical, that advances the science of clinical chemistry. Such information may concern analytical and molecular diagnostic techniques, instrumentation, data processing, statistical analyses of data, clinical investigations in which chemistry has played a major role, and laboratory animal studies of chemically oriented problems of human disease. Equal consideration is given to manuscripts in English from any country, whether or not the authors are members of the AACC. Manuscripts are usually evaluated by two reviewers who may or may not be members of the Editorial Board. Manuscripts found by the editors to be inappropriate for the journal may be returned to authors without peer review. Prospective authors of Editorials and Reviews should submit, for review by the Editor, a brief outline of the proposed manuscript before preparing it in final form. Authors are usually notified of the disposition of a manuscript within 6 weeks of the date of its receipt by the Editor.

Editorial Policies. Manuscripts are considered for publication with the understanding that (a) each author has participated significantly in the work and assumes responsibility for the manuscript's content; (b) the authors have disclosed any commercial associations that might pose a conflict of interest with the work submitted; (c) no paper presenting the same information — other than an abstract or preliminary report or poster (cited in the manuscript) — has been or will be published elsewhere; (d) unique materials necessary to reproduce the results reported are available for use by qualified investigators; and (e), if the paper is accepted, copyright is transferred to the publisher. These agreements must be conveyed by completing the Author's Assurances and Assignment of Copyright form, which can be copied from page 6 of the Information for Contributors published in the January issue of the journal, or obtained from the Washington editorial office. All authors must sign the form, and original signatures are required; the form should be sent by mail, not fax.

Authors citing unpublished work by individuals other than themselves should include with their manuscript a letter from the individuals concerned giving permission to cite the work. For studies conducted with humans, a statement in the text should indicate whether the procedures used were in accordance with the ethical standards of their institution's responsible committee or with the Helsinki Declaration of 1975, as revised in 1983.

Submission of Manuscripts. Submit four copies of the manuscript to Dr. David E. Bruns, Editor, Clinical Chemistry. For regular mail: PO Box 3757, University Station, Charlottesville, VA 22903-0757. For express delivery: Suite 609, 1224 West Main Street, Charlottesville, VA 22903. Include a covering letter stating (a) the title of the paper; (b) the paper's main point; and (c) the name, address, telephone and fax numbers, and E-mail address of the corresponding author.

Manuscript Preparation. Use double (typewriter) or triple (word processor) spacing throughout the manuscript. Type or print on one side of each page. For most manuscripts, include the following sections: an abstract, introduction, materials and methods, results, discussion, and references. For Reviews and Case Reports, use headings appropriate to the text. After tentative acceptance, revised version of manuscripts should be submitted on disk.

Illustrations. Submit four copies of each figure on high-quality coated glossy or laser printer paper. Photocopies on absorbent or bond paper are not acceptable. Verify that symbols and lettering will be legible when the figures are reduced to publication size. Final version of figures should be supplied on disk as well as on hard copy.

The complete Information for Contributors is published in the January issue of the journal. ©1995 The American Association for Clinical Chemistry, Inc.

Subscriptions and Reprints:

Telephone: 1-800-892-1400; Fax: 1-202-887-5093

Reprints: Reprint order forms are mailed to authors with proofs of their manuscripts and can also be obtained at the numbers shown above. Minimum order is 100 copies.

Missing Copies: Claims will not be allowed (a) unless we are notified within 3 months after the issue date for domestic and Canadian subscribers, or 6 months after the issue date for foreign subscribers; (b) if notice of a recent change of address has not been received; or (c) if the reason for claim is “missing from files.” For claims to be processed, the subscriber's number and exact name and address as they appear on the mailing list must be included in correspondence.

Back Issues: Single copies of current and back-volume issues: $15.00 ($20.00 CCREE); ask for current prices on Special Issues. Microfilm/microfiche versions available by volume from University Microfilms International, 300 Veeb Rd., Ann Arbor, MI 48106; contact UMI directly for prices.

Indexing Services: Clinical Chemistry is covered by the major indexing and abstracting services, including the following: Abstracts Express, Analytical Abstracts, Biological Abstracts, BIOSIS, Chemical Abstracts Service, Current Awareness in Biological Sciences, Current Clinical Cancer, Current Contents/Life Sciences, Excerpts Medicus/EMBASE, Index Medicus, MEDLINE, Reference Update, Research Alert, Science Citation Index, and SciSearch. The full text of Clinical Chemistry, starting with Vol. 38, No. 1, is available online through BRS Colleague.

Copyright Permission: Reprographic copying beyond that permitted by Sections 107 or 108 of the US Copyright Law is authorized by the American Association for Clinical Chemistry, Inc., for internal or personal use, provided that (a) the base fee of $2.50 per copy is paid directly to the Copyright Clearance Center, Inc., 222 Rosewood Drive, Danvers, MA 01923, or (b) a photocopy license has been granted by the CCC. Fees are subject to change. This consent does not extend to other kinds of copying, such as general or external distribution, resale, advertising, or promotional purposes or for creating new collective works; for these purposes, contact AACC Inc., 2101 L Street, NW, Suite 202, Washington, DC 20037-1526.

Disclaimers: Manuscripts published in Clinical Chemistry reflect the individual views of their authors and, in the absence of a statement to the contrary, not the views of the institutions with which the authors are affiliated. The contents of advertisements or articles are not to be construed as official statements, evaluations, or endorsements by the Board of Editors or the American Association for Clinical Chemistry, Inc.

Clinical Chemistry is printed with organic-based inks.

How the Greatest Minds in Clinical Chemistry Stay That Way

Join today and receive the newest Government Affairs Report FREE!

Whether you're a medical technologist, chemist, pathologist, lab technician, director or researcher . . . if your profession touches the world of clinical chemistry, you need to be a member of the American Association of Clinical Chemistry! AACC gives you a forum to exchange ideas, and solutions -- to share problems -- to keep up-to-date on late-breaking new developments -- to meet new colleagues -- and build crucial professional relationships.

Only AACC membership offers you the opportunity to:
- Receive Clinical Chemistry journal -- FREE*;
- Attend the AACC National Meeting at a 25% discount;
- Meet and network with professional colleagues;
- Be a part of the most dynamic organization for professionals in the clinical chemistry field. AACC. How the greatest minds in clinical chemistry stay that way.

*Full Members and Student Associates only.

MEMBERSHIP APPLICATION

Note for international members: Clinical Chemistry journal will be shipped by surface mail (seven to ten weeks). To expedite journal delivery, Canadian and Mexican members may pay an additional postal fee of $5.00 U.S. for air mail delivery. For all other non-U.S. members, the additional fee is $10.00 U.S. for air mail (7-10 days).
OPENING UP NEW HORIZONS. WITH THE NEW AVL OMNI.

analysis of blood specimens is a job for people and machines. In the past, you had to constantly adapt your work to increasingly complicated instrumentation. That all will change with the new AVL OMNI, a critical care analyzer that is a lot easier to operate because it is much more flexible. The AVL OMNI has a touch-screen with a graphic user interface that guides you through the various functions. Random access allows for blood gas measurements, CO-Oximetry and electrolyte analysis. They can be run either separately or in combination by simply touching the screen. Because each measurement module is supplied via a single channel that can be switched on or off, a sample volume of 5 µl per module is sufficient for the AVL OMNI to achieve a precise measurement within 40 seconds. But that is not all that makes the new AVL OMNI an easy-to-operate critical care analyzer. Heavy gas bottles for the calibration have become past history, because the AVL OMNI calibrates without calibration gas. The zero maintenance sensors are part of the reduced maintenance, if the sensors ever need replacement, it can be done in seconds. Because it’s modular, the AVL OMNI not only cuts your purchase, service and maintenance costs but can also be upgraded easily to meet your growing needs. For the people who work with it, the AVL OMNI opens up completely new horizons. Because from now on they are the number one priority, not the machine.

XVI International Congress of Clinical Chemistry
8-12 July 1996 Wembley, London, UK

Following the success of the International Federation of Clinical Chemistry meetings in San Francisco and Melbourne, the 1996 International Congress will take place in London in July 1996.

The Scientific programme has something for everyone, with speakers from all over the world participating in the event. The scientific sessions give plenty of opportunity for delegate participation, including poster presentations and round table discussions.

London is a major world capital that everyone enjoys visiting. Excellent value air fares should be available from all over the world. With Heathrow and two other major airports serving London there are direct flights from major USA centres. Accommodation ranging from student flats to all levels of London hotels will be available through the congress at reasonable prices. July is in the middle of the English summer and an excellent time for visiting the city.

Besides the formal scientific sessions, the XVI ICCC will be an important time to meet informally with scientists from all over the world. What better place to do this than among the world famous and historic sites of London. The congress programme also includes details of the five pre- and post-congress symposia and also some tours of the British Isles.

Please consider coming to this important meeting by sending back the reply card below.

XVI International Congress of Clinical Chemistry, PO Box 227, Buckingham, MK18 5PN, UK
Tel: +44 (0)1280-860613 Fax: +44 (0)1280-860487

Please send me the final programme, abstract and registration forms for the XVI International Congress of Clinical Chemistry, London 8-12 July 1996

THE GOLD STANDARD IN IMMUNOASSAY DATA PROCESSING

**RIA AID**

RIA AID for data from both isotopic and non-isotopic assays.

**ELISA AID**

ELISA AID tailored to give great flexibility of sample placement on the plate.

Software systems for the acquisition, analysis and archiving of immunoassay data.

**SYSTEM FEATURES**

- Direct connection to your beta or gamma counter or plate reader
- Handles data from all assay types: RIA, IRMA, EIA, FIA, ELISA
- Can be configured to service up to 15 counters running simultaneously
- Built-in worklist system
- Results can be offloaded to other software systems (spreadsheet, database)
- Thorough user documentation in plain English
- OEM versions available
