In This Issue...

- Laboratory Evaluation of von Willebrand Disease
- Capillary Electrophoresis Reviewed
- HLA Class II Genotyping
- Automated Assay of Total Complement Activity
- Abraham Flexner’s Legacy
We Redefined Reliability.
We Redefined Accuracy.
We Redefined Ease-of-Use.
(Then We Had Lunch.)

Actually, we had 12 years’ worth of lunches. That’s how long we spent developing the most revolutionary immunoassay software there is. For example, StatLIA® can tell you if your antibody or control specimen is bad. Really. Along with your tracer, buffer ... or any of the 9 components.

Plus, with StatLIA you can:

- Immediately pinpoint the cause of a flagged assay without repeating it
- Detect fluctuations in standard curves and their causes
- Measure the effect of reagent variations on your results
- Determine if an assay is bad (even if the controls are in)
- Connect all your immunoassay instruments on-line
- Analyze each tech’s performance for each test method

StatLIA’s unique standard curve lets you review an assay’s reliability quickly, by graphing confidence limits, a reference curve, and the current assay’s replicate data points.

Find out why StatLIA is now used by major clinical, pharmaceutical, research and government laboratories throughout North America.

Information for Contributors

Clinical Chemistry welcomes manuscripts containing original information, experimental or theoretical, that advances the science of clinical chemistry. Such information may concern analytical and molecular diagnostic techniques, instrumentation, data processing, statistical analyses of data, clinical investigations in which chemistry has played a major role, and laboratory studies of chemically oriented problems of human disease. Equal consideration is given to manuscripts in English from any country, whether or not the authors are members of the AACC. Manuscripts are usually evaluated by two reviewers who may or may not be members of the Editorial Board. Manuscripts found by the editors to be inappropriate for the journal may be returned to authors without peer review. Prospective authors of Editorials and Reviews should submit, for review by the Editor, a brief outline of the proposed manuscript before preparing it in final form. Authors are usually notified of the disposition of a manuscript within 6 weeks of the date of its receipt by the Editor.

Editorial Policies. Manuscripts are considered for publication with the understanding that (a) each author has participated significantly in the work and assumes responsibility for the manuscript's content; (b) the authors have disclosed any commercial associations that might pose a conflict of interest with the work submitted; (c) no paper presenting the same information — other than an abstract or preliminary report or poster (cited in the manuscript) — has been or will be published elsewhere; (d) unique materials necessary to reproduce the results reported are available for use by qualified investigators; and (e), if the paper is accepted, copyright is transferred to the publisher. These agreements must be conveyed by completing the Author's Assurances and Assignment of Copyright form, which can be copied from page 6 of the Information for Contributors published in the January issue of the journal, or obtained from the Washington editorial office. All authors must sign the form, and original signatures are required; the form should be sent by mail, not fax.

Authors citing unpublished work by individuals other than themselves should include with their manuscript a letter from the individuals concerned giving permission to cite the work. For studies conducted with humans, a statement in the text should indicate whether the procedures used were in accordance with the ethical standards of their institution's responsible committee or with the Helsinki Declaration of 1975, as revised in 1983.

Submission of Manuscripts. Submit four copies of the manuscript to Dr. David E. Bruns, Editor, Clinical Chemistry. For regular mail: PO Box 3757, University Station, Charlottesville, VA 22903-0757. For express delivery: Suite 609, 1224 West Main Street, Charlottesville, VA 22903. Include a covering letter stating (a) the title of the paper; (b) the paper's main point; and (c) the name, address, telephone and fax numbers, and E-mail address of the corresponding author.

Manuscript Preparation. Use double (typewriter) or triple (word processor) spacing throughout the manuscript. Type or print on one side of each page. For most manuscripts, include the following sections: an abstract, introduction, materials and methods, results, discussion, and references. For Reviews and Case Reports, use headings appropriate to the text. After tentative acceptance, revised version of manuscripts should be submitted on disk.

Illustrations. Submit four copies of each figure on high-quality coated glossy or laser-printer paper. Photocopies on absorbent or bond paper are not acceptable. Verify that symbols and lettering will be legible when the figures are reduced to publication size. Final version of figures should be supplied on disk as well as on hard copy.

The complete Information for Contributors is published in the January issue.

Subscriptions and Reprints:

Telephone: 1-800-892-1400; Fax: 1-202-887-5093

Reprints: Reprint order forms are mailed to authors with proofs of their manuscripts and can also be obtained from Tina Blume, at the numbers shown above. Minimum order is 100 copies.

Missing Copies: Claims will not be allowed (a) unless we are notified within 3 months after the issue date for domestic and Canadian subscribers, or 6 months after the issue date for foreign subscribers; (b) if notice of a recent change of address has not been received; or (c) if the reason for claim is "missing from files." For claims to be processed, the subscriber's number and exact name and address as they appear on the mailing list must be included in correspondence.

Back Issues: Single copies of current and back-volume issues: $15.00 ($20.00 CCRE); ask for current prices on Special Issues. Microfilm/microfiche versions available by volume from University Microfilms International, 300 Veeb Rd., Ann Arbor, MI 48106; contact UMI directly for prices.

Indexing Services: Clinical Chemistry is covered by the major indexing and abstracting services, including the following: Abstracts Express, Analytical Abstracts, Biological Abstracts, BIOSIS, Chemical Abstracts Service, Current Clinical Cancer, Current Contents/Life Sciences, Excerpta Medica/EMBASE, Index Medicus, MEDLINE, Reference Update, Research Alert, Science Citation Index, and SciSearch. The full text of Clinical Chemistry, starting with Vol. 38, No. 1, is available online through BRS Colleague.

Copyright Permission: Reprographic copying beyond that permitted by Sections 107 or 108 of the U.S. Copyright Law is authorized by the American Association for Clinical Chemistry, Inc., for internal or personal use, provided that (a) the base fee of $2.50 per copy is paid directly to the Copyright Clearance Center, Inc., 222 Rosewood Drive, Danvers, MA 01923, or (b) a photocopy license has been granted by the CCC. Fees are subject to change. This consent does not extend to other kinds of copying, such as for general or external distribution, resale, advertising, or promotional purposes or for creating new collective works; for these purposes, contact AACC Inc., 2101 L Street, NW, Suite 202, Washington, DC 20037-1526.

Disclaimers: Manuscripts published in Clinical Chemistry reflect the individual views of their authors and, in the absence of a statement to the contrary, not the views of the institutions with which the authors are affiliated. The contents of advertisements or articles are not to be construed as official statements, evaluations, or endorsements by the Board of Editors or the American Association for Clinical Chemistry, Inc.

Clinical Chemistry is printed with organic-based inks.

4A CLINICAL CHEMISTRY, Vol. 41, No. 4, 1995
"Prostatic hyperplasia or cancer? I wish someone offered simple and accurate diagnosis."

We do. Wallac's new and unique PROSTATUSTM PSA Free/Total kit* allows accurate differentiation of prostatic hyperplasia and cancer. Its principle is simple: by measuring PSA free and total separately, and calculating the free/total ratio, one can detect prostatic cancer with high specificity.

This new concept offers advantages to the patient by quelling fears associated with cancer and increasing confidence in diagnosis. It also cuts costs associated with detection of cancer by reducing the need for complicated and expensive procedures.

Wallac's new test, based on proven DELFIA® dual-label technology is the first viable proposition for prostatic cancer screening – PROSTATUSTM PSA Free/Total kit.

* Patent applied for.
This product may not yet be available in all markets.
DELFIA is a registered trademark and PROSTATUSTM is a trademark of Wallac Oy, Finland.
**THE GOLD STANDARD IN IMMUNOASSAY DATA PROCESSING**

**RIA AID**

RIA AID for data from both isotopic and non-isotopic assays.

**ELISA AID**

ELISA AID tailored to give great flexibility of sample placement on the plate.

Software systems for the acquisition, analysis and archiving of immunassay data.

**SYSTEM FEATURES**

- Direct connection to your beta or gamma counter or plate reader
- Handles data from all assay types: RIA, IRMA, EIA, FIA, ELISA
- Can be configured to service up to 15 counters running simultaneously
- Built-in worklist system
- Results can be offloaded to other software systems (spreadsheet, database)
- Thorough user documentation in plain English
- OEM versions available

**1995 INSTITUTE**

**Frontiers in Laboratory Practice Research**

October 1-3, 1995 Atlanta, Georgia

**WHO SHOULD ATTEND:** Individuals with research interests in laboratory practice (physicians, laboratorians, policymakers)

**PURPOSE:** To discuss research strategies/methods for addressing major issues in laboratory practice.

Now accepting REGISTRATIONS and ABSTRACTS for posters in the following areas:

- Personnel
- Proficiency Testing
- Quality Assurance
- Testing & Patient Outcome
- Analytical Performance Goals
- Impact of Change
- Health Systems Research
- Medically Relevant Performance Goals

Sponsored by: CDC
AACC Annual Meeting and Clinical Laboratory Exposition

July 16-20, 1995 • Anaheim, California

16,000 Attendees*  500 Exhibitors*

Plenary Lecturer
Francis S. Collins, M.D., Ph.D.
National Center for Human Genome Research, National Institute of Health, Bethesda, MD

Workshops
• Lab Automation
• Flow Cytometry
• Drugs and Nutrition
• Nucleic Acids
• Analytical Methods
• Interpretation of Adult and Pediatric Chemistry Tests
• and 41 More!

Exhibitors
• 500 Exhibitors including:
  • Lab Automation and Robotics
  • Molecular Diagnosis
  • Near Patient Testing
  • OEM/Research Products

Symposia and Selected Topics
• New Sensor Technologies
• Frontiers in Lab Automation
• Endocrine Disorders
• Diseases of Aging
• Molecular Diagnosis
• and 13 More!

Roundtables
• Near Patient Testing
• DNA Based Laboratory Tests
• Therapeutic and Abused Drug Tests
• Tumor Markers
• and 116* More!

Make sure you stay in the center of the future developments in clinical laboratory science and get the information you need. To request a registration brochure, fax or write AACC today.

* Exhibits Projected for July 18-20, 1995

YES! I’m interested in attending the AACC Annual Meeting in ’95. Please send me:

AACC

Join 16,000* attendees and 500 companies* this year in Anaheim, California for AACC’s biggest, most important Annual Meeting and Exposition yet.

The scientific program will cover the latest breakthroughs in clinical laboratory science… there will be over 40 full and half day workshops… 120 face-to-face roundtables where you'll discuss critical issues with experts… 8 symposia and 10 selected topics… over 700 poster sessions… and more than 500 companies* displaying the latest in equipment, systems, products and services.
