In This Issue...

- Quantitative Polymerase Chain Reaction for mdr1 mRNA
- Apolipoprotein E Reviewed
- Simultaneous Measurement of Free and Total PSA
- Diagnosis of Inborn Errors by Tandem MS of Postmortem Bile
Bad Antibody?

StatLIA® immunoassay software immediately tells you if your antibody is bad. Really. Along with your tracer, buffer, incubation conditions ... or any of the 9 components.

StatLIA's unique standard curve lets you review an assay's reliability quickly, by graphing confidence limits, a reference curve, and the current assay's replicate data points.

Plus, with StatLIA you can:
• Immediately pinpoint the cause of a flagged assay without repeating it
• Detect fluctuations in standard curves and their causes
• Measure the effect of reagent variations on your results
• Determine if an assay is bad, even though the controls are in
• Connect all your immunoassay instruments on-line
• Analyze each tech's performance for each test method

Find out why StatLIA is now used by major clinical, pharmaceutical, research and government laboratories throughout North America.

Introducing
the most
specific
marker
available
to measure
bone loss.

No other marker is more specific for the collagen lost from bone.
Only Osteomark® quantifies cross-linked N-telopeptides (NTx), a unique biochemical marker specific to the type I collagen found in bone. As such, it provides valuable information about the rate of bone resorption—simply and efficiently. So you can identify patients who are experiencing excessive bone loss. And at the same time help physicians monitor the effectiveness of therapies aimed at preventing or treating osteoporosis—a growing concern for an aging population.

NTx is a direct degradation product of the bone resorption process. Diet and other connective tissues do not contribute to the urinary pool of NTx. What’s more, NTx is excreted in urine in a form that cannot be broken down further—so that urinary NTx levels directly reflect the amount of bone collagen resorbed. No other bone marker offers this degree of specificity and sensitivity.

The speed and simplicity of ELISA technology.

And specificity is only part of the story. Osteomark is also easy and convenient to run—in your laboratory—with your personnel and equipment. The test is formatted as a micro-well ELISA and utilizes an enzyme-labeled monoclonal antibody to quantify NTx in urine. No specimen pre-treatment is necessary. Nor is there the need for time-consuming acid hydrolysis, extraction, or high-performance liquid chromatography. Reliable results are obtainable in as little as 2 hours—start to finish.

For more information, call 1-800-99 OSTEX.
Good news!

When buying lab equipment from Pharmacia Diagnostics, you can rest assured of total quality.

We’ve even got the paper to prove it.

In December we met the tougher 1994 version of the ISO 9001 standard, the world’s most demanding quality norm. It places stringent demands on all aspects of our operation – from product development and production to marketing.

Which is nice to know when you’re buying in vitro allergy diagnostic equipment – equipment that must ensure accurate information for physicians.

It also proves that our own internal quality program measures up to the world-class standards of the ISO norm. Whether dealing with the product itself, the level of service or medical processes involved.

Simply put, we cannot succeed until we’ve met your utmost demands for quality.

So although we’d love to boast about our certificate, the real test will be living up to quality in everything we do.

Circle No. 216 on Reader Service Card
THE GOLD STANDARD IN IMMUNOASSAY DATA PROCESSING

**RIA AID**

RIA AID for data from both isotopic and non-isotopic assays.

**ELISA AID**

ELISA AID tailored to give great flexibility of sample placement on the plate.

Software systems for the acquisition, analysis and archiving of immuno-assay data.

**SYSTEM FEATURES**

- Direct connection to your beta or gamma counter or plate reader
- Handles data from all assay types: RIA, IRMA, EIA, FIA, ELISA
- Can be configured to service up to 15 counters running simultaneously
- Built-in worklist system
- Results can be offloaded to other software systems (spreadsheet, database)
- Thorough user documentation in plain English
- OEM versions available
