New BD™ P100 Blood Collection System
Setting the Standard in Plasma Proteomics

BD™ P100 enables greater recovery and preservation of plasma proteins:

On-board stabilizers provide immediate protection, and an innovative mechanical separator* minimizes cellular contamination.

Ideal for clinical research, drug discovery, and diagnostic assay development.

* Patented

For Research Use Only - Not for Use in Diagnostic Procedures

Information for Authors

Clinical Chemistry is published by the American Association for Clinical Chemistry (AACC). The journal welcomes contributions of original information, experimental or theoretical, that advance the science of clinical chemistry. Submissions should adhere to the “Uniform Requirements for Manuscripts Submitted to Biomedical Journals” (N Engl J Med 1991;324:424–8).

Abstract. Manuscripts are evaluated by anonymous peer reviewers. Authors are usually notified of the disposition of a manuscript within three to four weeks of its receipt. Equal consideration is given to manuscripts in English from any country, whether or not the author is a member of the AACC.

Copyright. Manuscripts are considered with the understanding that each author has participated in the work and assumes responsibility for the content; that the authors have disclosed any potential conflicts of interest; that the same information has not been and will not be submitted for concurrent review, nor published elsewhere (other than as an abstract, preliminary report, or poster cited in the manuscript); that unique materials necessary to reproduce the results are available to readers; and that if the manuscript is accepted, copyright will be transferred to the publisher. To convey these assurances, all authors must sign the copyright form (available on the AACC web site at http://www.clinchem.org/info_ar/info_a_outline.shtml).

Unpublished Work. When citing unpublished work or opinions of others, provide a permission letter from them.

Manuscript Preparation. Text. Most common word-processing software formats are accepted; Microsoft Word is preferred. Use 12-point font, 1-inch margins, and double spacing throughout. Do not use headers or footers, but do number the pages, starting with the title page as page 1. For guidance on manuscript preparation and style, consult our Information for Authors at http://www.clinchem.org/info_ar/info_a_outline.shtml.

Images: The acceptable image file formats for print publication are TIFF (tagged image file format) and EPS (encapsulated postscript) both at 600 dpi resolution. The figures must be submitted as independent files, not embedded within a word processing document. Microsoft PowerPoint (PPT) files are also acceptable, but each file must have embedded fonts and only one image per slide, one slide per file. Verify that symbols and lettering will be legible when reduced to publication size. Figures should be redesigned or recreated if they do not appear sharp and clear on paper. Authors are advised to use our online Digital Expert evaluation tool to test print figures before submitting them.

The author will be required to bear the full cost of the preparation and publication of color illustrations, invited contributions excepted. The charge for the first color figure is $1500. Subsequent color figures or parts of figures are $500 each.

Tables: Tables should be created in a common word-processing format. Spreadsheet-generated or embedded image tables should be recreated in the word-processing document and included with the text of the manuscript.

The complete Information for Authors is available at http://www.clinchem.org/info_ar/info_a_outline.shtml.

Manuscript Formatting

- Double-spaced text, 1 inch margin, twelve-point font size in Arial, Helvetica or Times New Roman
- Numbered pages
- Title page listing title, authors (first name, middle initial, last name), each author’s affiliation during the study, corresponding author’s contact information, running title, keywords, list of any previous presentation of manuscript and any disclaimers
- Number references sequentially in main text
- Reference list formatted according to Information for Authors
- Accuracy of journal abbreviations in the reference list checked against the National Center for Biotechnology Information database (http://www.ncbi.nlm.nih.gov/entrez/linkout/journals/journalists.cgi)
- SI Units used throughout manuscript according to Information for Authors

Metadata (to be entered online)

- A valid and unique e-mail for each author
- Authors’ current institutions, address, telephone and fax
- Forms to be completed online
  - Author Disclosure Forms
  - Author Contribution Forms
- Have available the number of references, tables, figures, and supplemental data files
- Clinical Chemistry manuscript number of any companion papers (if applicable)

Compliance with Guidelines

- A STARD checklist is required for all studies or trials of the diagnostic accuracy or performance of a diagnostic test, a CONSORT diagram is required for all randomized and Phase III trials, a MIAME checklist is required for all studies that present data for microarray experiments.
- All studies involving human subjects must indicate that they are in compliance with the Declaration of Helsinki ethical principles for medical research involving human subjects.
  A statement must be included in the text that Institutional Review Board approval was obtained and written informed consent obtained from study subjects.

Permissions

- Copyright forms to be supplied by each author upon acceptance prior to publication
- Written permission from the copyright holder is required to reproduce any copyrighted material
**Clinical Chemistry Call for Papers**

**“Molecular Diagnostics: At the Cutting Edge of Translational Research”**

*Clinical Chemistry* is pleased to announce a special upcoming theme issue on Molecular Diagnostics edited by Drs. Carl Wittwer and Dennis Lo entitled "Molecular Diagnostics: At the Cutting Edge of Translational Research”.

The purpose of this issue is to highlight the latest technological advances and clinical applications of nucleic acid diagnostics. New technology in microarrays and sequencing has enabled genome-wide association studies that provide new molecular correlates of health and disease, while nanotechnology and microdevice integration promise personalized medicine. Advances in amplification and detection methods continue to simplify molecular diagnostics for the clinical laboratory.

*Clinical Chemistry* invites authors to submit original articles in molecular diagnostics to be considered for publication in this special issue.

**Areas of focus include:**

- Next generation sequencing
- Personalized diagnostics
- Microfluidics and nanotechnology
- MicroRNA
- Epigenetics
- Copy Number Variants
- Genome-wide association studies
- Real-time PCR
- High-resolution melting
- Cell-free plasma nucleic acids

**Be a part of this exciting issue!**

Submissions must be received through our online submission system at [http://submit.clinchem.org](http://submit.clinchem.org) no later than October 1, 2008. Your cover letter should express your interest in having your paper considered for the molecular diagnostics theme issue. Journal guidelines for submission apply. See Information for Authors for details.
Laboratory Medicine: Into the Future

November 13-14, 2008
Marriott Waikiki Beach Resort and Spa • Honolulu, Hawaii

The field of laboratory medicine continues to rapidly change. You need to know what the greatest areas of change and opportunity will be for laboratory management and technology. Attend this forward-looking conference and benefit from the vision of leaders in the field who will explore with you the most challenging issues facing the industry. You will gain critical insights into the laboratory of tomorrow so that you can invest where it matters most and ensure you and your lab future success!

Attend and you will know:

• The IVD industry’s vision of the future
• The CDC’s view on global health issues and how best to prepare
• Technologies on the horizon to improve patient safety
• What ISO accreditation can do for your lab

... And much more!!

This program is co-sponsored by the AACB, the AACC and offered under the auspices of the APFCB. It is supported in part by an unrestricted education grant from Siemens Healthcare Diagnostics.

SIEMENS

Yes! Register me for the “Laboratory Medicine: Into the Future” Conference (PID 4736)

Full payment of all fees must accompany this form for registration to be processed. (We do not accept purchase orders.)

FOUR WAYS TO REGISTER:

• MAIL payment and registration form to:
  AACC, P.O. Box 630623, Baltimore, MD 21263-0623
• FAX registration form to: 202-887-5093 (credit cards only)
• PHONE AACC Customer Service at 800-892-1400 or 202-857-0717 (credit cards only)
• ONLINE registration is available at: www.aacc.org/AACC/events/meetings (credit cards only)

Become an AACC Member and SAVE:

☐ Yes, I wish to become an AACC member ($185) to register at the reduced member rate.
  AACC/AACB member early fee (received on or before October 13) . . . $450
  AACC/AACB member regular fee (received after October 13) . . . $500
  Non-member early fee (received on or before October 13) . . . . . . . . $560
  Non-member regular fee (received after October 13) . . . . . . . . . . . . . . $610
  Emeritus/student fee (received on or before October 13) . . . . . . . . . $225
  Emeritus/student fee (received after October 13) . . . . . . . . . . . . . . $250

AACC members should use promotion code 84 for the member price when registering online. Students and Emeritus members must register by fax, phone or mail. Students who are not AACC members must submit proof of student status when registering.

☐ I cannot attend, but don't want to miss out! Please send me information on purchasing the conference manual.

☐ If you have a disability and require special assistance, please check here. An AACC representative will contact you. We cannot guarantee on-site access without prior notice.

Cancellation Policy: All cancellations must be submitted in writing to AACC Customer Service no later than October 13, 2008, and are subject to a $35 processing fee. Requests received after October 13 will not be eligible for a refund; however, a substitute may attend with written notice. Written notices may be sent via fax to 202-887-5093, or via email to custserv@aacc.org.
Does it really matter which immunoassay analyzer we pick?

Can you tell the difference between apples and oranges?

Siemens Healthcare Diagnostics has the broadest portfolio of immunoassay systems and the freshest solutions to maximize your lab’s productivity.

Helping you find the most efficient and cost-effective solutions for your lab, no matter what challenges you face, is what we do best. By bringing together our impressive breadth of experience and expansive offering of systems and solutions, Siemens can help you meet the ever-changing needs of your laboratory. With high-performance product lines such as ADVIA Centaur®, IMMULITE® and Dimension®, combined with an unrelenting focus on your needs, it's easy to tell the difference. [www.siemens.com/broadest-portfolio](http://www.siemens.com/broadest-portfolio).

Answers for life.
Don’t miss this opportunity to learn about the latest developments in lab automation and informatics, including the most successful management strategies. You can also take advantage of BREAKOUT SESSIONS with leading companies and hear how they have approached automation projects in a variety of case studies.

Cancellation Policy: All cancellations must be submitted in writing to AACC Customer Service no later than Oct. 6, 2008, and are subject to a $35 processing fee. Requests received after Oct. 6 will not be eligible for a refund. However, a substitute will be acceptable with written notice to AACC Customer Service.
Do you think there’s a company that can offer us more reagent choices?

Do you think they grow on trees?

With the most comprehensive selection of immunoassay reagents available, Siemens Healthcare Diagnostics is clearly the one to pick.

Until now, no single company could provide a truly comprehensive menu of immunoassay reagents. By combining three leading diagnostics companies – Diagnostic Products Corporation, Dade Behring and Bayer HealthCare, Diagnostics Division, Siemens now offers testing choices covering more than 15 disease states. In fact, you’ve already made us a market leader in cardiac, fertility, oncology, thyroid and anemia testing. Our menu of unique assays is unmatched. With more than 150 varieties – and still growing – no one offers a better solution. www.siemens.com/more-choices.

Answers for life.
Examining cardiac troponin elevations at lower concentrations than the 99th percentile value used for MI diagnosis may identify patients who have not had an MI but still have a short-term risk of having an adverse cardiac event. Recent data also show that measuring low level troponin elevations could be useful for the risk stratification of heart failure patients, as well as for those with other chronic conditions.

What qualities should laboratorians look for in an assay that will be measuring low troponin concentrations? Current guidelines recommend that for MI diagnosis, cardiac troponin I (cTnI) assays have a sensitivity for detecting cTnI at the 99th percentile with high precision, but most contemporary assays do not meet these criteria. How this affects diagnosis is unclear.

Attend this important audioconference and know:
- What clinical applications are on the horizon for measuring low-level troponin
- What the data show about measuring low concentrations of troponin in patients with chronic diseases
- What it means when low concentrations of troponin are detected in critically ill patients
- What other troponin research indicates for the future of this important cardiac marker

**The Experts:**

Stephen E. Kahn, PhD, DABCC, FACB, Moderator, Vice Chair of Laboratory Medicine; Director of Clinical Laboratories; and Professor of Pathology and Cell Biology, Loyola University Medical Center, Maywood, IL

Allan S. Jaffe, MD, Professor, Departments of Medicine and Laboratory Medicine, Mayo Clinic, Rochester, MN

Alan H.B. Wu, PhD, DABCC, Chief of Clinical Chemistry and Toxicology, San Francisco General Hospital; Professor of Laboratory Medicine, University of California, San Francisco, CA

**Target Audience:** Laboratory administrators, directors, and managers; pathologists; and IVD industry professionals involved in the research, development or performance of cardiac troponin tests.

This program is approved by AACC for 1.5 Category 1 ACCENT credit hours.

Learn about the latest developments in troponin testing! Register today!

*This event is supported in part by an educational grant from Siemens Healthcare Diagnostics.*

**TO REGISTER**

Go to www.aacc.org and under “Upcoming Events,” select this audioconference. Then, click “Register” to register online or print a registration form.
Biochip Array Technology

from bench to bedside...
Randox with you every step of the way

Complete patient profiling in a single patient sample

- Simultaneous multi-analyte testing based on ELISA principles
- Up to 23 tests per biochip
- For disease screening and monitoring

Available test panels include:

- Cardiac array
- Thyroid arrays
- Fertility array
- Tumour PSA array
- Tumour monitoring array
- Cytokine arrays
- Drugs of Abuse arrays
- Research arrays available

Biochip Array Technology -
the way forward in multi-analyte testing

- FDA cleared and CE marked
- High throughput fully automated testing or lower throughput semi-automated testing
- Multiple sample matrices including serum, whole blood, urine and oral fluid
- Multi-analyte controls and calibrators traceable to international standards
- Precision typically less than 10%
- Over 25 years experience in biomarker development for clinical diagnostics
- Expanding test menu including routine and novel biomarkers

“revolutionizing healthcare through continuously improving diagnostic solutions”

Randox Mission Statement

The Thermo Scientific LC/MS family of products streamlines your workflow and sets new standards for accuracy, efficiency, and reliability.

With the sensitivity and specificity to identify an expanding universe of substances, we can tailor a system to meet your most rigorous testing requirements, whether your focus is clinical research, clinical toxicology, or forensic toxicology.

We create benchtop solutions that drive up throughput, drive down costs, and serve as the foundation of a sustainable analytical platform today and into the future.

Visit www.thermo.com/clintox to request our Clinical Resources Kit, and see how you can streamline your workflow from sample to answer.

Tel: 1-800-532-4752 • Email: analyze@thermo.com

From sample to answer: Thermo Scientific LC/MS workflow solutions.
Why pay more...now that access is affordable?

For more than 15 years you have had only one choice in performing label-free, online kinetic studies.

**Times have changed.**

The A100® system from Attana enables molecular interaction studies in real-time without the need of labels, resulting in faster and more cost effective research.

Association rate
\[ k_{on} = 3.5 \times 10^5 \text{ M}^{-1}\text{s}^{-1} \]

Dissociation rate
\[ k_{off} = 2.5 \times 10^{-4} \text{ s}^{-1} \]

Affinity
\[ K_D = 0.7 \text{ nM} \]

Offering affordable access and versatility, Attana systems are employed at leading universities and biotech companies.

Working with antibodies or proteins Attana gives you confidence in your results.

So, why pay more now that access is affordable?

To better understand how Attana can benefit your research, please contact us at **sales@attana.com**
