ON THE COVER Dr. Carl Burtis. Anyone who has met Carl Burtis will remember him because of his large physical stature. Even when all of the AACC past-presidents gather together (of which he is one) in their red coats, Carl is easy to pick out of the group. His mischievous nature and history of practical jokes stand equally as tall. In this month's Inspiring Minds feature we provide a glimpse into the personal and professional life of an individual who helped develop the centrifugal analyzer, has served as editor of the famous *Tietz Textbook of Clinical Chemistry*, and most importantly is a loving grandfather (see page 585).
