ON THE COVER It can make you feel hot or make you feel cold. It can make you gain weight or lose weight. It can promote frequent bowel movements or constipation. It can cause you to be nervous or have no energy at all. It is the butterfly-shaped endocrine gland officially known as glandula thyroidea, but which we simply call the thyroid. This month’s issue contains 3 reports from the IFCC Working Group for Standardization of Thyroid Function Tests, plus an accompanying editorial that discusses the challenges associated with the harmonization of thyroid testing results. ©Reproduced with permission.
