**ON THE COVER** Methicillin-resistant *Staphylococcus aureus* (MRSA) ingestion by a neutrophil. MRSA is just one of a number of the bacteria responsible for difficult-to-treat infections. Antibiotic resistance and the resulting risk for ineffective treatment of infections are serious and growing problems. This issue of *Clinical Chemistry* contains a Q&A in which 5 experts with different roles address several questions about antibiotic resistance, including questions focusing on how to best combat this growing problem.
