**ON THE COVER** Linda Thienpont. When Thienpont first entered the field, routine assays for estradiol, progesterone, testosterone, thyroxine, and other thyroid hormones varied widely depending on who developed them and where they were performed. Wanting to

hold the field to a higher standard, she has dedicated her career to the development of reference materials and reference methods to help bring "harmonization" and "trueness" to laboratory measurements. Yet, when asked to describe herself and her career, she emphasizes the importance of simple rewards: "I am a person who is always happy. I am happy with my work, happy in my family. I'm happy with my normal life." But her story has more to it than that, as you will see when you read more about her in this month's Inspiring Minds feature.
