

Achieve results with sample sets from AACC's Universal Sample Bank

Features of AACC's Universal Sample Bank include:

- ▶ Ethnically and geographically diverse adult population (18+)
- ▶ IRB-approved collection protocol
- ▶ Fully audited by CRO
- ▶ Samples screened for HbA1c, Creatinine, and NT-ProBNP

AACC now offers pre-screened plasma/serum sample sets from more than 800 donors to assist IVD manufacturers with establishing accurate reference ranges and troponin cutoffs.

A set of samples from AACC's Universal Sample Bank, together with data from screening test results, comprises a representative adult population that can be used in any reference range study.

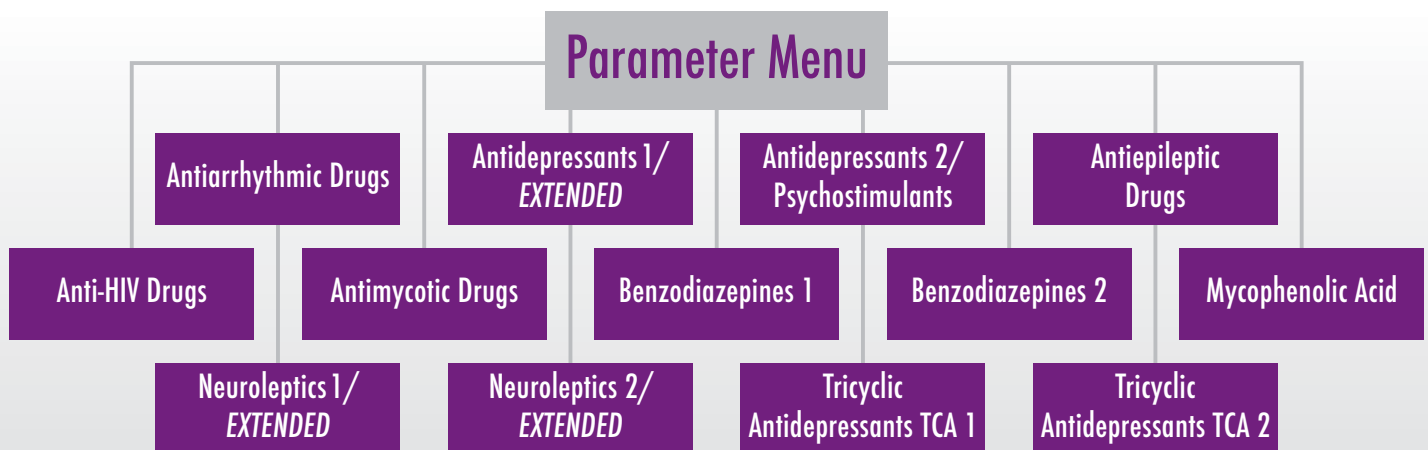

Sets of donor samples are available to laboratories and IVD manufacturers, with rebates available to those who share the results of their cardiac troponin assays.

Visit www.aacc.org/SampleBank for more information and to purchase your sample set.

MassTox® TDM Series A

Unique modular system for clinical mass spectrometry

1 Basic Kit – 1 MasterColumn® – More than 150 Parameters

Determine more than 150 parameters with one single column and one sample prep procedure: www.chromsystems.com

Management system certified according to:
DIN EN ISO 9001, DIN EN ISO 13485,
ISO 13485 CMDR

These products are not available in all countries.
Please contact your local Chromsystems sales
representative for availability in your region.

Quick Guide to BODY FLUID TESTING

by Darci R. Block and
Deanna D. H. Franke

The Quick Guide to Body Fluid Testing is intended to provide clinical laboratory directors, managers, and medical laboratory scientists with practical information to consider when testing body fluids. This concise pocket reference outlines the entire body fluid testing process, beginning with the preanalytical phase, which includes collection, labeling, transport, processing, and test requests/order management. Practical how-to guidance is provided to complete the analytical validation and includes figures that illustrate the preparation of specimens for each experiment and example calculations to manage and analyze the data for test performance verification in body fluid matrices. Postanalytical considerations are outlined, including best practices for reporting, and some common interpretive information about body fluid testing results is also provided.

Get an overview of the clinical applications of LC-MS from world-wide experts

PHOTO BY JONATHAN HILMER

Introductory Liquid Chromatography Mass Spectrometry for the Clinical Laboratory

ONLINE CERTIFICATE PROGRAM

Professional faculty in laboratory medicine outline important practices for sound process performance of this essential technology. This AACC online certificate program is appropriate for those with little exposure to mass spectrometry, or for those users who wish to understand its clinical aspects. 12.0 ACCENT CE credits are offered for graduates.

ONLINE COURSEWORK INCLUDES:

- Laboratory techniques for precise measurement
- Performing basic calculations
- Making reagents, standards and calibrators
- MS theory and components
- HPLC separation theory and components
- Sample preparation
- Considerations for reporting results
- Financial considerations for including mass spectrometry testing in your lab
- Training tools and overview

Register today.

Quick Guide to **HEMOSTASIS** THIRD EDITION

by Marisa B. Marques and
George A. Fritsma

The Quick Guide to Hemostasis, Third Edition, is a comprehensive update of the Quick Guide to Coagulation Testing, Second Edition. The third edition continues as a readily available pocket reference for health practitioners who order, collect, perform, or interpret hemostasis tests and who administer hemostasis therapy.

The Guide outlines common hemorrhagic and thrombotic conditions together with their respective assays to emphasize accurate laboratory evaluation. Treatment discussions include the prophylactic and therapeutic use of nonbiologic, synthetic, and plasma-derived components to control bleeding, and antithrombotics that prevent or resolve arterial and venous occlusions.

The Guide expands on a series of "front-end" quick-access tables that summarize hemostasis assays and therapies with their reference intervals and therapeutic ranges. Platelet function and antiplatelet drug testing details have been added. The third edition reflects current practice standards as it describes the management of trauma-induced coagulopathy, thromboelastography, and laboratory measurement of the new direct oral anticoagulants.

*Better health through
laboratory medicine.*

Department of Laboratory Medicine, School of Medicine

Title: Professor, Associate Professor or Assistant Professor without tenure position

UNIVERSITY *of* WASHINGTON

The Department of Laboratory Medicine, University of Washington, seeks pathologists for full time Professor, Associate Professor or Assistant Professor without tenure in clinical chemistry on the Physician-Scientist or clinician educator pathway. This would be a 12-month, multi-year appointment. University of Washington faculty engage in teaching, research and service. The primary service responsibility will be to participate in the direction of one or more of the Department's clinical chemistry laboratories. Additional responsibilities include the teaching of residents, fellows, medical students, and medical laboratory scientist program undergraduates, and development of an extramurally funded research program. Applicants must possess an earned M.D.-Ph.D., or M.D. degree, and be board-certified or board-eligible in Clinical Pathology or possess an earned Ph.D. and be board-certified by the American Board of Clinical Chemistry. Documented experience is required directing clinical laboratories and in the clinical interpretation of clinical chemistry testing results. Research experience and a record of publications are also required. Graduates of non-U.S. medical schools must have completed all three steps of the U.S. Medical Licensing Exam (USMLE), or equivalent as determined by the Secretary of Health and Human Services.

Applicants should submit a letter detailing their research interests and future goals and a current CV, and arrange to have four letters of recommendation submitted.
All materials should be received no later than January 31, 2017, and should be sent to:
Chemistry Search Committee, c/o Karen Walter, Box 357110,
University of Washington, Seattle, WA 98195-7110 (kwalter@uw.edu).

The University of Washington is an affirmative action and equal opportunity employer.
All qualified applicants will receive consideration for employment without regard to race, color, religion, sex, sexual orientation, gender identity, national origin, age, protected veteran or disabled status, or genetic information.

QUICK GUIDE TO Designer Drugs

Barry Levine, Justin M. Holler, and Shawn P. Vorce

Spiral binding

Copyright: 2014

Pages: 204

ISBN: 9781594251702

Product ID: 9260

Illicit drug chemists have been modifying structures of abused drugs to circumvent legal restrictions and evade detection. The novel compounds they create have been given the moniker "designer drugs."

The Quick Guide to Designer Drugs reviews the major classes of abused drugs where this phenomenon has been

occurring. Included are discussions of designer cathinones (bath salts), synthetic cannabinoids (spice, K2), and designer phenethylamines and tryptamines, as well as analogs of benzodiazepines, ketamine, opioids, and phencyclidine. Specific sections are devoted to the designer cathinones and synthetic cannabinoids because of their popularity for use and abuse.
