PEARLS OF LABORATORY MEDICINE

Clinical Chemistry Trainee Council (CCTC) is a free, multilingual, online program for residents and fellows in laboratory medicine. The program provides a wealth of free educational materials and interactive tools, including Podcasts, Guide to Scientific Writing, Question Bank, Pearls of Laboratory Medicine, and much more. The Pearls are brief presentations on one key topic succinctly presented using slides, audio, and transcript supplements.

Join the CCTC today (traineecouncil.org) for free access to the following Pearls of Laboratory Medicine. With over 100 Pearls now available, 3 are highlighted here.

ON THE COVER Michelangelo's *David*. Starting with an awkwardly misshapen block of marble, Michelangelo created the ideal form—a young, attractive male in peak health. Yet, even the perfect male has a subtle physical flaw described today as amblyopia (i.e., lazy eye). Whether intentional or not, David's left eye focuses forward while his right eye stares at some distant spot. The fact that David seems in peak health and yet has a physical flaw makes him the perfect cover image for the January 2019 special issue of *Clinical Chemistry*, which is devoted to Men's Health. The topics included in this issue range from the male microbiome to male contraceptive development to hormone therapy in transgender patients to the Movember (yes, Movember) movement whose goal is to give men the tools they need in times of medical challenges, helping them live life and live it well. © Reproduced with permission from QQ7 / Shutterstock.com.
